LOG:

[09/26/2017] First Release of the ChestX-ray dataset

[11/22/2017] Upload FAQ_CHESTXRAY.pdf

[11/22/2017] Update Data_Entry_2017.csv to eliminate the inconsistency of image labels between Data_Entry_2017.csv and BBox_List_2017.csv. Totally 188 entries are updated.

[12/14/2017] Update FAQ_CHESTXRAY.pdf

[12/14/2017] Release data split files: train_val_list.txt and test_list.txt

[4/14/2020] Update Data_Entry_2017.csv to correct errors in the follow-up #s and ages of some patients. Please note that the suffix of the image name (e.g., _001, _002) does not necessarily indicate the follow-up #. Please refer to the Follow-up #" to see the correct information.

[08/12/2025] Added a folder (MAPLEZ - Improved labels for the CXR8 dataset extracted with LLM) with link to labels extracted from the radiology reports with an LLM, with demonstrated improved quality of extracted labels, more label types, and improved downstream classifier quality.

[10/09/2026] Duplicate Images in the NIH Chest X-ray Dataset

We identified several pixel-identical images in the NIH Chest X-ray dataset. Some identical images are assigned to different patient IDs and, importantly, some appear across the training and testing sets.

The following image pairs are pixel-identical:

| Image 1 | Split | Image 2 | Split |
|---|---|---|---|
| 00005681_024.png | Test | 00027864_003.png | Train |
| 00012388_000.png | Train | 00017214_007.png | Test |
| 00027864_000.png | Train | 00028328_000.png | Test |
| 00012388_001.png | Train | 00017214_007.png | Test |
| 00012388_001.png | Train | 00012388_000.png | Train |
| 00005403_024.png | Train | 00005537_011.png | Train |
| 00007108_008.png | Train | 00027864_002.png | Train |
| 00008182_001.png | Train | 00011504_008.png | Train |
| 00027864_001.png | Train | 00028591_002.png | Train |
| 00029402_001.png | Test | 00029476_004.png | Test |

In particular, four identical-image pairs occur across the training and testing sets, which may cause data leakage when the provided train/test split is used for model development and evaluation.

We thank Hassan Salem Hussein Saad, Faculty of Engineering, Fayoum University, Egypt, for identifying and verifying these duplicate images.
